

# HD ROD RACK

Thank you for purchasing the MHX HD Rod Rack. This unit securely stores your rods, so they are ready at a moment's notice. We know the time and effort it takes to build and maintain top tier tackle, so don't just throw it in the corner. Store them properly in the MHX HD Rod Rack. From inshore to offshore and freshwater to fly, this rod rack holds all your prized tackle!

## LIST OF CONTENTS:

- A. Top Plates (2)
- B. Base Plate
- C. Uprights (6)
- D. Full thread cap head screws (12)
- E. Full thread cap head screw with washer and nyloc nut (12)
- F. Allen wrench
- G. L-shaped wrench

## INSTALLATION INSTRUCTIONS

**1.** First, unbox the parts and check them against the parts list above. The tools for assembly are included in the box. You will have an allen wrench (F) and an L-shaped wrench (G).

**2.** Start with the uprights (C). These connect the base plate (B) to the top plates (A). When installing the uprights, your nylon nuts and washers go on top, as there is a recessed hole to fit the cap head crew on the bottom of the base plate.

**3.** Once your uprights are installed, you will see there are two threaded inserts on the top of the uprights. Line up the screw holes on the top plate to the threaded inserts on the uprights and be sure the removable wing braces line up with the bent butt gimbal pins at each of the four corners of the base plate. Now secure the top plates to the uprights with the cap head.

**4.** To store bent butt rods you will need to remove the wing brace at each of the four corners on the top plates.

Your MHX HD Rod Rack is now ready to protect your investments.
